DETAILED ACTION

Allowable Subject Matter

Claims 1-7, 10-20, 23, 24 and 75-81 are allowed.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

With respect to independent claims 1 and 12, the prior art does not disclose, in the claimed environment, a device for monitoring cell status comprising a sensor, fluid controls, a first substrate, a second substrate defining a first passage, and a third substrate positioned above the second substrate to define a second passage and a chamber. The Dodgson reference represents the closest prior art. Dodgson describes a cell monitoring apparatus that includes a plurality of stacked substrates arranged to create first and second passages. Dodgson, however, teaches that the first passage is formed between two independently formed substrates as opposed to a single, autonomous substrate (the second substrate) as required by the claims. See page 13 of Applicant's remarks (4/21/2008). Dodgson does not teach a second substrate comprising a body portion that defines a first passage located between the first side surface and the second side surface of the substrate. Furthermore, the Klemic reference does not adequately address the deficiencies of Dodgson because Klemic does not disclose a second substrate that defines a first passage. Rather, Klemic teaches that microfluidic channels are formed within a PDMS layer that is fabricated into the backplate. As a result, Klemic does not disclose a first, second and third substrate

arrangement. Instead, Klemic teaches that the first passage is formed within the first substrate (backplate) instead of the second substrate as required by the claims. See page 16 of Applicant's remarks (4/21/2008).

The Nisch (US 6315940) and Rubinsky (US 6482619) references represent pertinent prior art, but like Dodgson and Klemic, fail to show Applicant's claimed substrate arrangement. Nisch discloses a cell monitoring apparatus comprising a first passage (Figure 3:63) formed entirely within a single substrate (Figure 3:51). Rubinsky likewise discloses a cell monitoring apparatus comprising a first passage formed entirely within a single substrate (Figure 1:11). However, these references are similar to Klemic in that the first passages are formed within a first substrate base layer as opposed to a second substrate formed above a first substrate..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
